

The Roller Guide

FAT HOG

History of the Hog

The Hog was born with one mission:

To get the job right, first time, every time. With no mistakes.

With Fat Hog, you get top quality decorating products.

You get a cracking result. And you get an easier life.

Fat Hog is made for professionals, by professionals with over 115 years experience in making specialist decorating products.

The new Fat Hog roller ranges give you the best tools for every job and for any budget.

For the definitive top notch finish, Fat Hog Evolution has been engineered to deliver ultimate performance – roller sleeves that are smarter, stronger and faster than the rest.

If you fancy a product that's a bit clever, rely on Fat Hog's Trade Choice + range boasting high quality woven acrylic and enhanced product features for a great professional finish.

If no fuss is what you're after, the Trade Choice range gives trade quality results at superb prices, just the job when budgets are tight.

The best tools for any job? Fat Hog. And no mistake.

Be a Breed Apart

Invest in the best

For the best results always buy quality tools, your reputation depends on it! A quality tool won't let you down even when using budget paint. You can always rely on Fat Hog to help you achieve a professional finish.

Prepare for work

Before you use it – wash it out and work it in! Wash well first then moisten the roller with the paint to be used and roll out on a piece of cardboard or wallpaper. A roller sleeve that has been worked-in well will absorb paint better and ensure any fibre remainders are removed before painting.

Wet your Hog!

Get clean results with the following clean working tips:

- Don't dip above the cage bearing.
- Roll off along the edge of the paint tray then re-dip.
- Repeat the process until the roller is loaded with paint.
- Never dip the roller completely into the paint.

The same applies when working with paint kettles or tins.

Keep it clean

Get more life out of your roller – by looking after it!

After using:

- Wash it thoroughly.
- Remove as much liquid as possible.
- Hang the roller up to dry out freely to avoid pressure marks in the pile. (Don't leave it wrapped in a plastic bag or in a bucket of water as its life will be reduced!)

Take extra care with sheepskin rollers – wash thoroughly as above but give them an extra wash in mild soapsuds to avoid any possible felting.

If in doubt, give us a shout!

For further information please ring 01924 354100

After undergoing specialist expert development the Fat Hog Evolution range has been unleashed and is specifically designed to be even smarter, stronger and faster than before. Offering exceptional application and finish compared to other products on the market Fat Hog Evolution truly is a different animal.

Gate crashing the market with intelligent fibre and foam technology Fat Hog Evolution roller sleeves are engineered to deliver outstanding results on every kind of surface.

Intelligent technology ensures whatever the substrate there is maximum paint absorption, controlled paint release, high resumption ability and the best possible surface image.

Backing up the entire Evolution range is a **ROCK SOLID GUARANTEE** giving you 28 days to get your money back if you fail to be impressed by the incredible features on show.

(For full terms and conditions on the Rock Solid Guarantee please see Page 14).

- > **SMARTER** | Fat Hog Evolution has been designed by the experts and utilises the latest intelligent technologies for outstanding performance qualities.
- > **STRONGER** | Fat Hog has already proven its fearsome power when it comes to endurance but Evolution has raised the bar even further. Designed for heavy-duty professional application the new improved Hog is going to take some wearing down.
- > **FASTER** | Fat Hog Evolution has exceptional recovery power to enable a highly efficient professional finish first time every time.

Smooth

- > 12mm high grade polyester "lint free" fabric
- > Perfect paint loading and release for the finest finish on smooth surfaces
- > No roller marks or edge tracking
- > Thermally fused core for maximum durability
- > Suitable for emulsion, water based gloss and acrylic eggshell paints

PRODUCT CODE	SIZE	CORE SIZE	PILE LENGTH
FI0170	9" (229mm)	1 3/4" (44mm)	12mm

Semi Rough

- > 13mm woven polyamide
- > Ultimate absorption and transfer of paint for maximum coverage on semi rough surfaces
- > Strong fibre recovery for the highest labour efficiency
- > Easy to clean
- > Thermally fused core for maximum durability
- > Suitable for emulsion and smooth masonry paints

PRODUCT CODE	SIZE	CORE SIZE	PILE LENGTH
FI0020	9" (229mm)	1 3/4" (44mm)	13mm
